

Counterbalanced electric trucks

The reliability
of experience

Reliability

Each component
is tested under the most
extreme conditions

“Nardò Track”

Untiring

Each detail of the new-generation electric trucks produced by OM has been designed to set new reliability standards. During day-to-day work, in the most demanding environments, these trucks are untiring partners in all material handling operations. Following widespread and well-established practices in the car industry, each new model is subjected to extreme tests for each of its components. And these tests produce concrete benefits for our customers: lower costs for servicing and down time.

Safety comes first in the trucks produced by OM. The entire OM product range is compliant with and surpasses the strict European safety regulations.

OMISP: OM Intrinsic Safety Program

is the OM program aimed at delivering the highest level of safety for its lift trucks under any condition of use. The OMISP includes the Mast Safety System (MSS), the block of the hydraulic functions when the operator is not on board, and automatic speed reduction in corners. These solutions anticipate the future international standard ISO-DIS 3691-1.

Customer's friendliness

XE 13-30^{ac} range of counterbalanced electric trucks

XE 13-20^{ac}

This product range is composed of models with three or four wheels and a capacity of 1.3 to 2 tons. Thanks to the excellent spatial distribution and the functional layout of the components, the XE 13-20^{ac} is capable of working even in the most confined spaces, guaranteeing a high level of comfort for the operator which means increased productivity.

XE 22-30^{ac}

An attractive design and precise ergonomics characterize this family of electric trucks with capacity ranging from 2.2 to 3 tons. These trucks represent an ideal choice even in place of internal combustion models, with lower operating costs and no environmental problems.

Ecology and flexibility

When the operator takes his seat on an OM electric truck, he is immediately at ease and can begin work in the shortest time possible. Each control is designed and positioned at the driver's seat according to ergonomic criteria that minimize operator fatigue. OM's long experience in the production of electric lift trucks guarantees our customers an investment which is profitable over time: so much substance without any compromises.

Dynamism

Professional service and a large range of variants

OM, which has been producing lift trucks for over 50 years, is a market leader in Italy and present in more than 50 nations worldwide with its own commercial network composed of over 200 partners including authorized dealers, importers and branches.

The ever-growing OM commercial network guarantees, always and everywhere, the best and most professional service and maintenance on its own trucks.

OM offers a large range of variants on its trucks in order to meet any type of request or need: open and closed cabs, special equipment, masts of any type and dimension, manual reverser, extra-comfort

seats, lights and tyres to meet any requirement. Our sales network is able to satisfy any particular need you may have.
