

# Pallet Stackers

A complete product range,  
a reliable choice

# Reliability

Tireless supporters  
of your success: we're working  
for your satisfaction

## Compact and safe, fast and easy to handle, in order to promote the goods' flow and the optimization of your warehouse

The wide range of OM electric pallet stackers has been designed to entirely meet all handling and storage needs of load units inside stockrooms and warehouses.

The "heavy duty" versions are specific for more intensive and demanding applications.

Certain models are also equipped with the "initial lift" function, in order to allow the stacker to get over ramps and low steps. Residual capacities are excellent, even at the maximum heights.

Stability and safety are two strong points for the entire product range.

# Customer's friendliness

## All OM products adopt a friendly technology: simplicity and efficiency at your service

### **CL<sup>ac</sup> – CN – CNi – CNS**

The OM pallet stackers are a necessary medium inside any warehouse, an essential tool for all types of indoor handling of goods. Reduced dimensions for improved manoeuvrability even in confined spaces. A wide range of masts, with excellent residual capacities even at great heights, which always guarantee perfect visibility. Top-level performance and ergonomics.

### **CTX – CTXi**

The electric pallet stackers with platform are truly reliable and productive lift trucks, designed to work even under difficult and demanding conditions, especially when the transport distances become significant. The tiller drive is electrically assisted. The controls are all intuitive and easily accessible. Also available with initial lifting of the fork arms, in order to get over ramps and low steps.

### **CLR – CLD – CSR – CSRi**

The electric pallet stackers with driver on board are designed for intensive applications, when travelling distances are relevant and when less strain on the operator can result in increased productivity. In the CLR the operator is semi-seated. The CLD allows to transport two loading units at a time. The CSR, in which the operator is comfortably seated, is also available in the version with "initial lift".

### **IDEA**

Idea is an indoor counterbalance stacker which is very reliable and flexible. It has a capacity of 1000 kg up to over 5 metres of height; a width of 850 mm, only. It is 'ideal' in light applications which require speed and precision. Compact lines, excellent visibility, great performance. Total control through the multifunction hand grip, maximum manoeuvrability in complete comfort and safety.

## We are close to your needs, we effectively meet your requests

Thanks to the use of highly efficient motors and accurate control electronics, OM pallet stackers always ensure excellent performance.

The forks lifting and lowering is swift and soft, with no jerks. Outstanding stability and a high level of safety under any conditions of use, thanks to the introduction of a system for autocompensation of the load wheels' level and a automatic speed adjustment system when loaded or turning.

The controls are all easily accessible and intuitive to operate.

The ergonomic tiller allows total control of the functions with outstanding comfort.

# Dynamism

Boost your business:  
OM gives your work the right push

## We take your needs in charge, we put your warehouse in motion

A modern and attractive design unite all the pallet stackers of OM product range, representing precise functional and safety needs with style. Visibility is ideal with the wide selection of masts available. Reduced dimensions and a compact form allow improved manoeuvrability even in narrow spaces. For your convenience, on several models the battery can also be extracted laterally.

With tilting platform, semi-seated or seated driver, the OM stackers allow you to achieve maximum efficiency even when the distances to be travelled become significant. Maximum comfort and ergonomics, in order to minimize strain on the operator and enable higher productivity.
